...2011 Severe Weather Awareness Week for Nebraska...

Today marks the third day of Severe Weather Awareness Week for the state of Nebraska, which continues through Friday, March 18th.

Severe Weather Awareness Week provides the National Weather Service an opportunity to test communication systems and to get potentially lifesaving information out to the public. Now is the time for people to review their safety plans and be prepared for severe weather season.

The topic for today is tornadoes.

There were 38 tornadoes reported across Nebraska in 2010, which is 13 below the 30 year average of 51 tornadoes. There were no injuries or deaths reported. The first tornado of the year touched down on April 23rd in Jefferson County, and the last tornado of the year touched down on September 13th, again in Jefferson County. The busiest month of the year for tornadoes was June, with 22 tornadoes, and the busiest day of the year was June 7th, with 7 tornadoes reported.

Remember that if a tornado warning is issued, or you see a tornado approaching, you need to seek shelter immediately. Tornadoes can sometimes strike with little or no warning, so it is important not to waste time when seeking shelter.

When taking cover, a basement or underground shelter is your best option. If possible, get under something sturdy like a table or work bench. If an underground shelter is not available, take cover near the center of the house on the lowest floor, in a closet or a bathroom. Stay away from windows. Cover up with blankets or pillows to protect yourself from flying debris.

If inside a vehicle, mobile home, or in open country, leave immediately and get to the nearest reinforced shelter. If none is available, lie flat in the nearest ditch or other low lying area and cover your head with your arms.

When inside schools, malls, hospitals, or other public buildings, move quickly to the designated shelter. Always stay indoors, and go to interior hallways or small rooms on the lowest floor possible for protection. Stay away from windows. Do not stay in large rooms such as auditoriums or gymnasiums, as rooms with large free span roofs are vulnerable to tornadic winds.

Anytime the threat for severe weather exists, stay updated on the latest weather information by going to the National Weather Service Website, <http://www.weather.gov>, or by tuning in to NOAA Weather Radio All Hazards, or your local television and radio station. Make sure to watch for signs for approaching storms, such as darkening skies, increasing winds, flashes of lightning, and thunder.
